

# Shimadzu Electronic Balances General Catalog 2018

# Providing Balances and Scales for 100 Years

Supporting manufacturing in the future, utilizing 100 years of experience and knowledge

Shimadzu began manufacturing balances in 1918. Throughout this 100-year history, we have been at the forefront of providing precision, quality solutions for the most challenging R&D and QA/QC requirements. Our steadfast customer-focused commitment and unwavering dedication to technical excellence are both hallmarks of our history and the principles that guide us into the future.

# SHIMADZU ELECTRONIC BALANCES

## A Tradition of Weighing Expertise

Established in 1875 in Kyoto, Japan, Shimadzu Corporation is one of the pioneers of scientific precision instruments.

Top-pan and torsion balance production started in 1918, and equal-beam analytical balances were introduced in 1925. Since their release, the continuous improvement of Shimadzu balances has contributed to research and development across all industries.

Around the turn of the 20th century, precision weighing was a time-consuming practice performed only by experienced operators. Placing the sample and small masses on pans hung from a beam scale with a moving indicator was a tedious process. Shimadzu strove continuously to streamline weighing procedures. The introduction of the direct reading analytical balance (patented in Japan in 1948) signified a new era in weighing technology. In the Type L balance, the sensitive mass-loading work was replaced by convenient dial operations. This reduced weighing time by 66% and, subsequently, reduced demand for conventional balances.

Shimadzu then added the top-loading direct reading balance with Roberval's mechanism in 1959. Until recently many of these instruments were still utilized in modern laboratories. Shimadzu continued to pioneer new technologies, releasing its first

electronic balance in 1971—the Digibalance. This release marked a milestone in precision weighing, introducing simplicity and ease of use to analytical weighing.

Six years later (1977), the application of microprocessors in electronic balances further enhanced weighing performance. The compact ED Series provided substantial improvements in sensitivity, resolution, and stability.

More recently, Shimadzu has introduced user-friendly instruments and features to the market, such as:

temperature-based fully-automatic calibration in 1985, the first one-piece force cell (OPF, later renamed UniBloc) in 1989, the high-sensitivity AEM-5200 Micro Balance in 1993, and the unique WindowsDirect feature perfectly suited for the computerized laboratory of the 21st Century.

Its most recent achievement is the AP Series, advanced performance balances featuring UniBloc and a high response speed, and which are applicable for a wide range of applications.

Moving forward, Shimadzu is committed to providing innovative products for the analytical marketplace.

# UniBloc Power!

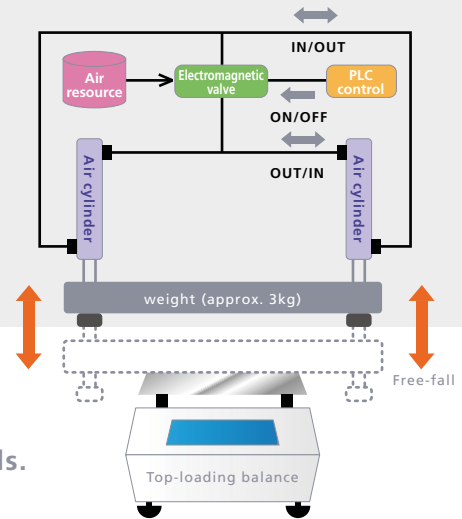

Shimadzu balances advance to the UniBloc generation

Impact resistance test for four balances

made by typical manufacturers.

(Shimadzu internal test)

Test results of impact resistance test with top-loading balances (Minimum display: 10 mg)

Test conditions

Free-falling the weight (3 kg) at 4 sec intervals.

(Weight was dropped from a height of 5mm for the first 100,000 impacts. After the first 100,000 tests, it was dropped from a height of 10 mm.)

The results of this impact resistance test prove Shimadzu UW/UX series balances with UniBloc technology are the toughest. Put Shimadzu balances in your lab and experience UniBloc power.

# UniBloc technology leads to a new world of measurement

Shimadzu introduced one-piece force cell technology for precision balances in 1989. Today's UniBloc is created by high-precision electric discharge wire processing applied to a block of aluminum alloy, and replaces the conventional electro-magnetic balance sensor assembly. UniBloc's compact, uniform structure ensures stable temperature characteristics, excellent response time and stable corner-load performance. In addition, the UniBloc design permits a consistency of production that assures reliability and a long operational life.

The updated UniBloc technology expands the UniBloc balance lineup, which now ranges from semi-micro with a minimum display of 0.01 mg to precision platform balances up to 52 kg in capacity.

One-piece force cell patented in USA in 1989, No. 4799561, in China in 1991, No. 12729, in Japan in 1995, No. 1905686

## UniBloc family of balances

# Shimadzu Balances Offer a Diverse Range of Functions

## 01

High  
Level  
Functionality

### Easy Setting

During operation, if you want to make the display slightly more stable, or alternatively, want to improve the response speed, you can make one-touch adjustments without interrupting measurement. A special indicator is provided that instantly shows the adjustment status.

### Menu Operation Key

#### Easy-to-Operate Key Layout

Keys exclusively for menu operations are arranged separately from the measurement keys. Menus can be operated intuitively using the cross-shaped key layout.

### Perfect Self Calibration

Electronic balances are precision instruments very susceptible to changes in room temperature. Sensitivity must be calibrated every time the balance is used since changes in room temperature influence mass measurement values, which are not supposed to change. The balance detects changes in room temperature that affect sensitivity, and automatically starts calibration using built-in weights. As a result, sensitivity errors are always kept within a constant range. This allows the operator to concentrate on measurement tasks without having to worry about sensitivity calibration.

The perfect self calibration (PSC) function keeps the sensitivity error within a constant range at all times.

### Clock-CAL

The balance starts calibration using built-in weights at preset times. If you set calibration times before important measurements (e.g. before starting work in the morning, or during the lunch or evening break), the balance will automatically start calibration when the preset time is reached. This lets you take stable, reliable measurements without worrying about sensitivity calibration.

## 02

Durability

### Next-Generation Mass Sensor: UniBloc

UniBloc is a completely new mass sensor, developed by Shimadzu through further modification of its OPF aluminum block mass sensor, a world's first in development. UniBloc is created by high-precision electric discharge wire processing applied to a block of aluminum alloy in order to replace the conventional sensor block assembly. As such, it uses no springs or screws. This uniform structure dramatically improves response and temperature characteristics, and the simple yet compact design enhances impact resistance. Balances equipped with UniBloc provide highly reliable mass measurement even with prolonged use.

## 03

Convenient  
Functions

### Internal Calibration

The balance has built-in motor-driven calibration weights. Sensitivity can be calibrated whenever needed with a single key press.

### Single-Lever CAL

The balance has built-in calibration weights. Sensitivity is calibrated with a simple lever operation. Sensitivity can be calibrated easily, whenever needed.

### Dry Battery Operation

The balance can also run on dry cell batteries, enabling use outdoors where no power is available.

### Checkweighing

Preset the upper and lower limit values to display pass, high or low, depending on the sample weight.

### Comparator Output

Proper weight, high, low and other pass/fail judgments can be indicated by a buzzer, or output externally as a contact signal. (Optional comparator buzzer or relay output interface required.)

### Backlight

Naturally, weight measurements can be taken even if the work site is dark, and prolonged use at normal work sites will not tire your eyes.

04

ISO  
GLP  
GMP

### Built-in Clock

With the optional printer connected, data can be recorded with date and time stamps. Calibration reports can also be date- and time-stamped, which is ideal for establishing the measurement management and traceability required by GLP, GMP and ISO 9001.

## ISO Calibration Report

Simply connect an optional printer to automatically print out which balance was calibrated when, and the calibration results. Absolutely no troublesome settings are required. Furthermore, the current date and time can be printed anytime during measurement.

(AUW Series Printout Sample)

## 05

## Network

## LabSolutions Balance

Connecting with LabSolutions lets you save data from balances, HPLC and other analysis instruments to a database, and create reports automatically. Uniform data management means no transcription errors, and is perfect for security.

## 06

## Applications

## Piece Counting

A built-in piece counting function enables balances to be used as parts counters (piece scales).

## Specific Gravity Measurement

A specific gravity calculation function based on the immersion method is built in. Just attach the optional Specific Gravity Measurement Kit to use a balance as a specific gravity meter.

## Built-in Animal Measurement Mode

The weight of mice, rats, rabbits, and other small animals can be measured. Stable measurements are obtained even if the animal moves.

## Carat Measurement

Results can be displayed in carats when measuring precious stones.

# Excellent Performance for Multiple Industries

## Chemical

- Weigh liquids and powders in development departments
- Measure specific gravity and moisture ratio of resin pellets, rubber, etc.
- Input mass values via connection to a titration system for quality management
- Measure mass and moisture ratio of dyes, pigments, and inks
- Measure and control materials accumulated on filters
- Control moisture ratio levels during catalyst production

## Food

- Check weights when receiving raw materials
- Confirm the net weight of final products
- Measure the moisture ratio and control the quality of raw materials and products
- Weigh trace quantities of additives
- Weigh raw materials during formulation

## Medical Products

- Control pharmaceutical usage quantities by measuring weight before and after use
- Weigh raw materials
- Confirm the weight of stents and other miniature medical devices
- Measure the moisture ratio and control the quality of raw materials and products
- Measure weight changes during animal experiments
- Measure drugs during drug manufacturing processes

## Cosmetics

- Measure weight changes in creams and compresses at specified intervals
- Control the quality of product containers and cases
- Measure the moisture ratio of hair, etc.

## Metals/Precious Metals

- Count the number of very small products
- Check the weight of coated steel sheets/plates after polishing
- Control the moisture ratio and specific gravity of iron and steel raw materials
- Measure trace quantities machined from metals, etc.
- Measure the specific gravity of rare metals and compare it to theoretical values
- Control the amount of wear on metal materials
- Weigh items when purchasing precious metals or bullion

## Electronics

- Check weights when manufacturing electronic circuit boards
- Measure tiny semiconductor parts
- Check for missing items in product packages based on weight
- Control the quantity of plastics used in LED lenses

## Automotive

- Measure exhaust gas accumulation on ceramic parts and filters
- Measure electrolyte injection quantities on lithium-ion battery production lines
- Measure moisture ratio in sheet materials
- Control contamination remaining on machinery parts

## Academia

- Use for training students
- Manage reagent use by weight, in combination with a chemical substances management system
- Use in lectures to explain basic principles and theory

# AP Series

Advanced Performance UniBloc Balances

Provides High-speed Response and High Stability  
A New Stage in Analytical Balance Performance

## High Speed

The response time for trace measurements (from 1 mg) is reduced to about 2 seconds.  
This significantly improves weighing efficiency.

## Stress Free

The STABLO-AP ionizer can be mounted.  
This eliminates the influence of static electricity, achieving reliable measurements in a simpler procedure.

## For HPLC

Functions are included for the preparation of buffer solutions used in HPLC.  
As a result, the operation can be performed accurately and easily, even by non-specialists.

## Save Your Operation

Equipped with USB as standard\*1. Includes many diverse functions to support users.

## For Regulation

Interlocking with LabSolutions Balance enables compliance with a variety of regulations for measurement data integrity, including ISO 17025 for testing laboratories, ISO 9001 and ISO 14001 for the manufacturing industry, and GLP/GMP and the United States Pharmacopeia (USP) for the pharmaceutical industry.

\*1 All models: USB-B type connector as standard AP-W Series: USB-A type and B type as standard

\* AP224W with optional ionizer

Watch the AP overview video on our website.  
<https://www.shimadzu.com/an/balance/analytical/ap.html>

# High Speed

Fast measurement significantly improves operational efficiency.

## Fast Response with UniBloc AP Technology

Shimadzu analytical balances boast a one-piece UniBloc weighing sensor, which is now even more advanced.

The response time is reduced to about 1/5 the time of previous models.

The improved UniBloc sensor offers a response time of just 2 seconds, an improvement from 10 seconds with the previous model.

Response During Trace Measurements with the 0.01 mg Model  
(Equivalent to 1 mg / With Conditions Set by Shimadzu)

Response During Trace Measurements with the 0.1 mg Model  
(Equivalent to 1 mg / With Conditions Set by Shimadzu)

Model	Previous Model	AP Series
0.01 mg	10 sec.	2 sec.
0.1 mg	7 sec.	1.5 sec.

\* AP135W

## Advanced Digital Control for Fast, Reliable Weighing

The improved measuring feel provides more comfortable use.

AP-i System (intelligent - Advanced Processing System)

Measuring feel has been significantly improved by using the advanced digital control technology and smoothing technology.

AP-i system provides reliable weighing even in an environment with significant external disturbances. This promises to increase the efficiency of your measurement operations.

# Stress Free

A variety of accessories and options suitable for semi-micro measurements

The multi stand can be used freely and easily.

(0.01 mg model only, equipped as standard)

With weighing paper, for example, if the tare is larger than the pan diameter, measurements can be simplified by attaching the special multi stand.

Measuring weights with a pipette can be simplified by placing a micro tube upright in the sample holder in the special multi stand.

Long rod-shaped samples can be measured in a stable state by placing them in the slot in the special multi stand.

The internal windbreak plate suppresses the influence of convection and airflow within the weighing chamber, improving the stability and response of measurement values.

## Built-in High-Performance Ionizer (Optional)

The ionizer eliminates influence of static electricity in 1/10 the time of previous models.

Note: Example of typical static electricity removal time ( $\pm 1000 \text{ V} \rightarrow \pm 100 \text{ V}$ )  
1 sec. for STABLO-AP and 10 sec. for STABLO-EX

AC Method with Excellent Ion Polarity Balance

Mount the STABLO-AP in the balance and use it as a built-in model

Comparison of Neutralization Speed (Representative Values)

Measurement Conditions

- Time from  $\pm 1000 \text{ V}$  to  $\pm 100 \text{ V}$
- Distance between CPM and ionizer: 100 mm
- For this evaluation, a 150 × 150 mm charged plate monitor (CPM, 20pF) was used.

# For HPLC

## For Users of HPLC Systems

### Buffer Solution Preparation Mode **NEW**

(AP-W Series only)

- **Recipes for 13 commonly used buffer solutions are included as standard**

Preparation recipes for commonly used buffer solutions are provided as standard.

e.g. disodium phosphate, sodium acid citrate

- **New buffer solution recipes can be registered**

If a buffer solution is not registered by default, it can be newly registered.

- **Instructions are shown on the display**

The target weighing value is shown on the display and analog bar in order to compare the target with the current weight. Manual calculation is not needed.

- **Record function**

Record output with date, time and operator name.

The pH level of mobile phase (eluent) solutions used in liquid chromatographs is adjusted to improve separation of components and extend the life of columns. This pH adjustment process is performed using a buffer solution. Currently, the most common method is using a pH meter to measure the pH as the solution is prepared; however, this process requires considerable time and effort, which can cause operational bottlenecks. An alternative method does not require a pH meter. It involves preparing solutions by weighing fixed theoretically calculated quantities of an acid and base.

AP series supports weighing these acids and bases. If the type and quantity of the buffer solution are specified, the balance displays the type and quantity of sample that should be weighed. Then the buffer solution can be prepared easily by adding water to the specified quantity of sample weighed accordingly.

Preparation example: When weighing and preparing 50 mM of di-sodium hydrogen phosphate, 2-hydrate and 50 mM of sodium dihydrogenphosphate, 2-hydrate in order to prepare 3 L of 100 mM phosphoric acid (sodium) buffer solution at pH=2.1:

Example of preparation by AP series

Select the buffer solution mode.

Specify the type and quantity.

Displays the name and quantity of sample.

Prepare as instructed on screen.

Complete buffer solution

\* Results can be printed with date/time and user ID.

Buffer solution preparation list			
Number			
1	100mM	phosphoric acid (sodium)	pH = 2.1
2	10mM	phosphoric acid (sodium)	pH = 2.6
3	50mM	phosphoric acid (sodium)	pH = 2.8
4	100mM	phosphoric acid (sodium)	pH = 6.8
5	10mM	phosphoric acid (sodium)	pH = 6.9
6	20mM	citric acid (sodium)	pH = 3.1
7	20mM	citric acid (sodium)	pH = 4.6
8	10mM	tartaric acid (sodium)	pH = 2.9
9	10mM	tartaric acid (sodium)	pH = 4.2
10	20mM	acetic acid (ethanolamine)	pH = 9.6
11	100mM	acetic acid (sodium)	pH = 4.7
12	100mM	boric acid (potassium)	pH = 9.1
13	100mM	boric acid (sodium)	pH = 9.1

## Sample Preparation **NEW**

(AP-W Series only)

When preparing a standard solution from a particular component, the standard powder for this component will be a hydrochloride or a hydrate. Preparing a standard solution of the target component at a desired requires difficult calculations prior to weighing it. With the AP series, however, the required weight value is automatically calculated, so it can be weighed without performing manual calculations.

Example of preparation by AP series

**Weigh 25 mg Amitriptyline to make a standard solution**

Standard sample of Amitriptyline is Amitriptyline Hydrochloride.

Calculation is essential to determine part of Acidum hydrochloricum by molecular weight in order to make a 100 mg/mL Amitriptyline solution.

Molecular weight of Amitriptyline: 277.4

Molecular weight of Acidum hydrochloricum: 36.5

Molecular weight of Amitriptyline Hydrochloride:  $277.4 + 36.5 = 313.9$

To compare the molecular weight of Amitriptyline Hydrochloride with Amitriptyline, the following calculation is necessary.

$$313.9/277.4 = 1.132$$

The molecular weight of Amitriptyline Hydrochloride is 1.132 times of Amitriptyline.

So, if 25mg of Amitriptyline is used, it follows that the weight of Amitriptyline Hydrochloride should be:

$$25 \text{ mg} \times 1.132 = 28.3 \text{ mg.}$$

Hence, 28.3 mg of Amitriptyline Hydrochloride is needed to make the correct standard solution.

Standard solution of Amitriptyline

Amitriptyline Hydrochloride

**No need for manual calculation**

AP series can automatically calculate the sampling weight using the molecular amount of the standard sample, molecular weight of unnecessary sample, and the target value in order to reach the correct concentration solution.

Just weigh the target weight value on display and the target weight of the standard sample can be obtained.

Checking weighing conditions on the same display

# Save Your Operation

Equipped with USB as standard.\*<sup>1</sup>

Includes many diverse functions to support users.

\*1 AP-W Series only

## USB Offers Greater Expandability **NEW**

(USB host: AP-W Series only)

Equipped with an RS-232C connector, a USB device and a USB host as standard. You can now simultaneously send output to both a computer and printer or connect a USB flash drive, a barcode reader, or an external numeric keypad.

Transcription errors can be avoided and data can be recorded without a computer.

USB and RS-232C are standard

USB host is available for AP-W Series

### USB flash drive

Connecting a USB memory device allows you to record large amounts of weighing data in CSV format. Used in combination with the interval output function, it also enables recording of long-term changes over time.

Example of a record:

File name  
Date and time  
Weighing value

\*The information saved will differ depending on the function used.

### Display capture function

Weighing display can be recorded into USB memory in BMP format. User name, date/time, and setting can be shown with display information.

The user name, time, measurement conditions, pass/fail judgments, and other information displayed on screen can be saved as is, enabling the recording of measurements, and checks after measurements.

### Numeric keypad

Connecting a common external numeric keypad makes it easier to enter numeric values. This is especially useful for entering the mass value of weights, setting upper/lower limit values for the comparator function, or entering the sample count during piece counting mode.

### Barcode reader

A barcode reader can be connected. Simply reading a barcode makes it possible to input user ID/Password. It is possible to manage sample IDs using barcodes.

An example of login by barcode

An ID and password are needed to log in to the AP series if protected access is activated. With the barcode, an operator can log in by scanning the barcode instead of inputting an ID and password.

\* The latest information can be seen from the Shimadzu website (<https://www.shimadzu.com/an/balance/>)

## Easy-to-Read Organic EL Display

(All models)

Because the pixel elements in the organic electroluminescence display emit light, the screen can be seen clearly even in dark locations. Multi-language display capability\*2 provides a more intuitive operating interface. A wider viewing angle has also improved the visibility of measurement values, which helps increase the efficiency of measuring operations.

\*2 Japanese, English and Chinese

Clearly visible from the side

```

Standard measurement
Parts counter measurement
Percent measurement
Averaging mode
Solid specific gravity
  
```

English example

### Exceptional Visibility

The visibility remains the same even when viewed from different angles. The viewing angle is a wide expanse of  $\pm 85$  degrees, both vertically and horizontally. That means the display is clearly visible even when working beside the balance. A high-resolution dot-matrix display makes it easy to read detailed text.

## Periodic Inspection Support Function **NEW**

(AP-W/AP-X Series only)

AP series supports periodic inspections. The function allows inspection of repeatability, corner load error, and linearity by simply following instructions displayed on the screen.

### Example of printing

Select the inspection mode.

In this case, repeatability inspection is selected.

Place standard weights as instructed.

Results are displayed.

### Printing sample

# For Regulation

For the Pharmaceutical Industry

## High-Security User Management **NEW**

(All models)

Operations can be kept secure with user ID and password protection. Access rights can be specified separately for each user to prohibit unauthorized actions such as performing calibration or changing the settings. User IDs can also be used for barcode management.

User Selection Screen

## Printing Data in Accordance with Various Regulations **NEW**

(All models)

Printing can be customized to indicate when the measurements were taken and by whom. Users are free to set which items are to output, and in what order. The date, time, calibration log, and other information can be printed depending on the purpose of printing, which supports compliance with ISO, GLP, and GMP.

## Minimum Measurement Value (Warning Function) **NEW**

(All models)

Reproducibility can be confirmed by repeatedly measuring weights as instructed by AP series. The minimum sample quantity is automatically determined from the standard deviation and recorded in AP series.

If the minimum sample quantity requirement is not satisfied during measurement, an indicator flashes to warn the user.

Minimum sample quantity

## Recipe Function (Achieve Your Preferred Compounding Process) **NEW**

(AP-W Series only)

Sample recipes can be registered, allowing users to simply follow displayed instructions. This is convenient when compounding medicines.

# And more...

## Wide Variety of Functions to Support Users

### Smart Settings

(All models)

Response and stability settings can be changed during measurements with a single touch. Changing the settings for different applications can make it even easier to use.

User-friendly arrow keys

The indicator is operated using the left and right arrow keys. Moving the setting toward [R] prioritizes response, which makes it easier to operate the balance. Conversely, moving it toward [S] makes it easier to stabilize weight values, which can improve readability in environments with vibration.

Moving it left prioritizes response and moving it right prioritizes stability. Five setting levels are available.

### Specific Gravity Measurement

(All models)

In combination with an optional specific gravity measurement kit, the balance can be used to measure specific gravity. Operations are simplified by a text-based navigation function. By using sinkers, the specific gravity of liquid can be measured as well. This allows measuring the specific gravity of metals, rubbers, plastics, and other materials easily.

First measure the empty weight.

Then place it in the container filled with water, as instructed on the screen.

The specific gravity value is displayed using simple steps.

### PSC and Clock-CAL

(AP-W/AP-X Series only)

A Perfect Self Calibration (PSC) function is included. The analytical balance automatically detects any temperature changes that could affect sensitivity and automatically starts calibration.

The Clock-CAL function enables automatic calibration at a pre-specified time (for example, before starting work, during lunch, or after work hours).

## Static Remover (Ionizer)

Special 3-Way Ionizer for Electronic Balances

# STABLO-AP

Shimadzu's proprietary 3-Way ionizer for analysts troubled by static charging of samples or containers  
One-touch attachment and removal adds even more convenience

— an excellent solution against **static electricity.**

STABLO-AP provides reliable measurement by removing static electricity.

### ■ Comparison of Static Removal Time (Typical Examples)

— STABLO-AP  
— Previous model

#### Measurement Conditions

- Time from  $\pm 1000$  V to  $\pm 100$  V
- $150 \times 150$  mm CPM (20 pF) used
- Distance between CPM and ionizer: 100 mm

Hand-held/On stand

Shimadzu's unique  
3-Way positioning

- ▶ AC corona discharge method enables excellent ion polarity balance
- ▶ Wide angle static removal
- ▶ High performance maintained over a long period of use
- ▶ No inverse charging
- ▶ Shimadzu's unique 3-Way Ionizer: hand-held / on stand

## Features of STABLO-AP

### Static Electricity Removal by Ion Irradiation

With the high-frequency AC corona discharge method, Shimadzu's STABLO-AP ionizer provides a stable ion balance and excellent static removal performance on samples and containers.

Precision weighing work becomes remarkably efficient.  
Electrodes are safely housed inside the unit.

#### Concept of static removal

### AC Method Produces Excellent Ion Balance

**AC method:** AC voltage is applied on the discharge needle and a well-balanced mixture of positive/negative ions is emitted in rapid alternation from one electrode.

**DC method:** DC voltage is applied to a couple of electrodes. One is positive and the other is negative. Each electrode emits ions of one polarity only. An effective static removal angle is limited if the two electrodes are distanced. As electrodes deteriorate, initial ion balance is lost.

#### AC method

#### DC method

### What is "ion balance"?

Ion balance is the balance of positive and negative ions that are supplied by an ionizer.  
If ion balance is poor, static electricity is not removed or inverse charging may result.

If ion balance is poor.....

Mount the STABLO-AP in the balance and use it as a built-in model

## Application

### Static electricity keeps the sample out of the ampoule

The sample is hard to handle because it adheres to the ampoule inlet and sides.

STABLO-AP removes the charge from the ampoule.

The static charge is gone in seconds. This improves productivity.

### Plastic wrap sticks to rubber gloves

Plastic wrap adheres to rubber gloves, making it difficult to work with.

Fasten STABLO-AP to the stand, and remove the static from the gloves.

The static is removed in about 10 seconds, and the plastic wrap no longer sticks.

### ■ STABLO-AP is convenient when using an electronic balance

When the powder in the Petri dish is electrically charged, and the numerical value fluctuates

When the powdered medicine paper is electrically charged, and the numerical value is unstable

When the measurement spoon is electrically charged, and bringing it near the pan affects the numerical value

## Specifications

Ion Generation Method	AC corona discharge method
Ion Balance	±10 V
Effective Static Removal Range	Approx. 400 mm from the outlet
Static Elimination Time (approx.)	1 second (Typical value) (from ±1000 V to ±100 V)
Ozone Concentration	0.06 ppm
Electrode Probes	Tungsten (durability: 30,000 hours)
Weight	Approx. 710 g (Main unit: 395 g, Stand: 315 g)
Operating Temperature and Humidity	0 °C to + 40 °C, 25 % RH to 85 % RH (non-condensing)
Rated Electric Power Supply	DC 24 V, 1.0 A
Model name	STABLO-AP

## Analytical Balances

## AU series

## Multi Functional Analytical Balance

## UniBloc Analytical Balances

AUW-D series dual-range semi-micro balances

AUW/AUX/AUY series analytical balances

## Excellent Weighing Performance

- Compact UniBloc mechanism and digital processing technology produce fast response and stability at the same time.

## For Applications

- Shimadzu's unique Balance Keys ([https://www.shimadzu.com/an/balance/balance\\_keys/](https://www.shimadzu.com/an/balance/balance_keys/)) a standard feature.  
Measurement results can be transmitted to Excel or other Windows applications without installing any additional software on your computer. All you have to add is one RS-232C cable.
- Piece counting, various mass units, below-weigh hook, specific gravity measurement software are all standard features.

AUW-D/AUX/AUY Series

AUW Series

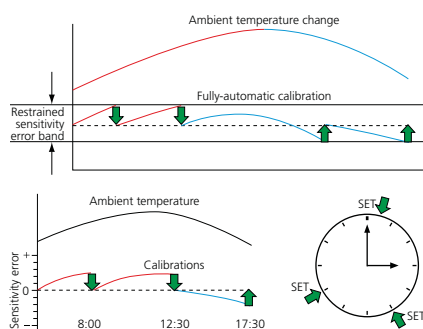

Choose one of the two models according to your field requirements.

Excellent response, stability and zero return performance – in a semi-micro balance.

## Choice of fully-automatic calibrations: PSC and Clock-CAL

Operator can choose from two fully-automatic span calibration methods. "PSC" is initiated based on temperature change detection, whereas "Clock-CAL" operates at user pre-set times (up to three times a day).

## Touch-key calibration

Automated calibration can be started by pressing keys. (AUW-D/AUW/AUX models)  
Also, your external calibration weights can be used for span calibration. (All models)

## GLP/GMP/ISO calibration report

Calibration report can be automatically printed using an optional electronic printer.  
Date and time are also output to meet GLP/GMP/ISO requirements.

## Interval Timer

Data can be automatically output at time intervals set in the range from 1 second to 99 minutes 59 seconds. This function can be also combined with Balance Keys. (AUW-D/AUW/AUX models)

## Piece Counting and Unit Conversion

In addition to piece counting, the balance can also perform measurements as percentages and in a variety of mass units, such as carat.

## RS-232C interface

All models a standard standard RS-232C interface for easy integration with other devices and computers.

## Specific Gravity Measurement

Installing the optional SMK-401 specific gravity measurement kit transforms the balance into a dedicated instrument for measuring specific gravity or density. Specific gravity measurement software is already installed in the Shimadzu balance.

## Standard Models of Analytical Balances

Economical Analytical Balance  
Equipped with UniBloc

- Adopts UniBloc, which provides excellent impact resistance, responsiveness, and stability
- Equipped with the Easy Setting function, so responsiveness and stability can be adjusted during measurements
- Buy a separately available I/O-RS cable to import the results to a PC (Equipped with the Balance Keys function)

## Internal Calibration (ATX only)

The balance has built-in motor-driven calibration weights. Sensitivity can be calibrated whenever needed by a single key press.

## Piece Counting

A built-in piece counting function enables balances to be used as parts counters (piece scales).

## Checkweighing

This displays pass, high, or low judgments.

## Formulation Mode

This is convenient when formulating (preparing) multiple substances.

## Percentage Measurement

Measures a percentage value with respect to a preset reference.

## Easy Setting

← Excellent responsiveness

Smoothly!

Flagship Models

The AUW/AUX/AUY series are recommended

For measurements down to 0.01 mg

When a chemical resistant metallic body is needed

For consistently good precision

For management of calibration records and measurement data by date and time

■ Perfect self calibration (PSC)/  
Clock-CAL functions are included

Built-in perfect self calibration (PSC) function  
(AUW-D, AUW, and AUX only)

Detects ambient temperature changes with an impact on sensitivity, and automatically performs sensitivity calibration. Built-in Clock-CAL function (AUW-D and AUW only) These balances perform sensitivity calibration automatically at preset times.

■ These balances have a built-in clock function.  
(AUW-D, AUW, and AUX only)

Data can be logged with the date and time. This is ideal for establishing the measurement management and traceability required by GLP, GMP, and ISO 9000.

For measuring specific gravity

The optional SMK-401 is required.

For outputting changes in sample quantity over time

For measuring samples 220 g or heavier

General Purpose  
Analytical Balances

## AT series

Standard Models

The ATX/ATY series  
are recommended

The Easy Setting function eliminates troublesome settings.  
They can be used anywhere, at any time.

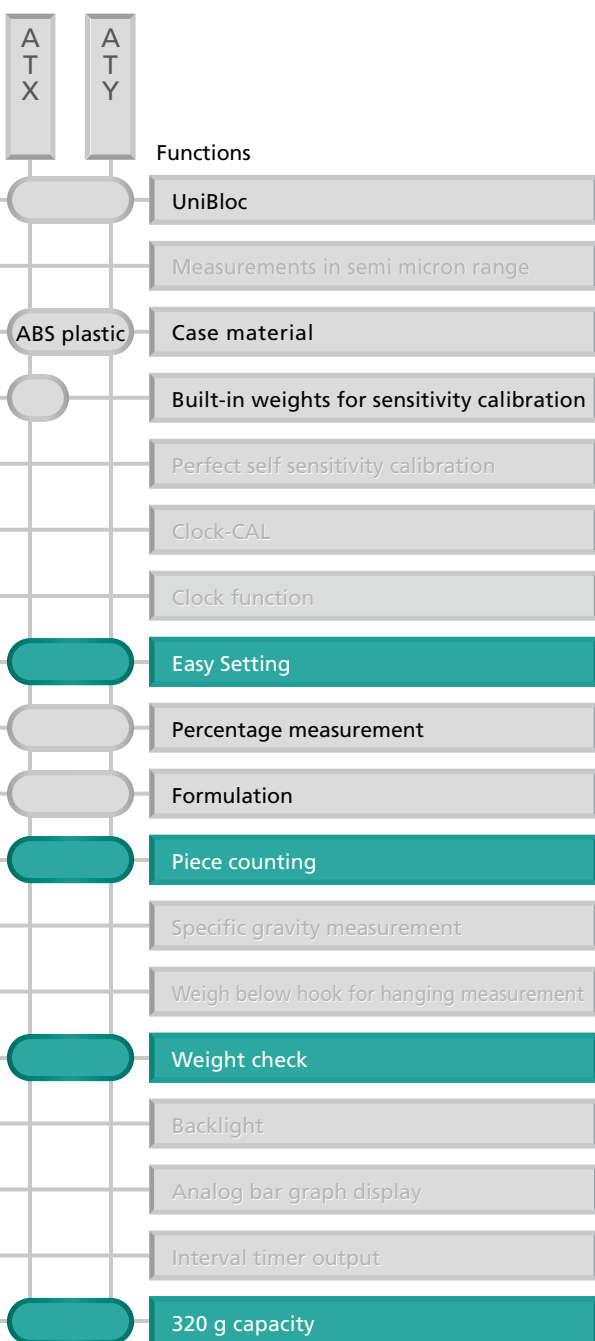

For balances that make weighing powders  
and liquids easy  
For use in environments subject to wind  
and vibrations  
For selectable stability and response

For measuring counts of various samples

Five types of sample weight units can be registered.

For measurements with reference  
weights configured

Weight check  
It is possible to measure out target mass, and display pass/fail  
judgments based on reference mass.

## Electronic Balances

UW/UX<sup>series</sup>

## Multi Functional Top-loading Balance

The line of Shimadzu top-loading balances is engineered with the UniBloc mechanism, resulting in unrivaled response, stability and durability. Powerful features support any imaginable weighing application. The UW Series includes internal calibration and fully-automatic calibration functions.

UW4200S UX4200S  
UW8200S UX8200S  
UW2200H UX2200H  
UW4200H UX4200H

UW620H UX620H  
UW820H UX820H  
UW1020H UX1020H

\* Windbreak can be removed.

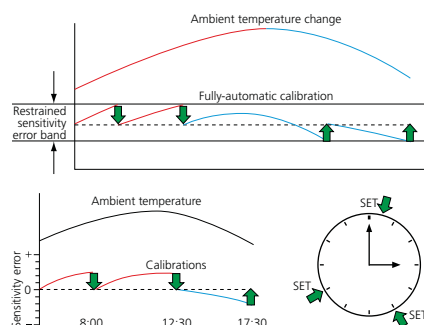

### PSC, fully-automatic calibration (UW only)

Calibration is carried out when a temperature change has been detected.

### Clock-CAL, fully-automatic calibration (UW only)

Calibration carried out at user-preset times (up to three times a day). Operators can work without unexpected interruptions.

### Automatic Touch-key Calibration (UW only)

Press just two keys to calibrate the balance whenever calibration is necessary.

### GLP/GMP/ISO Calibration Record

Just connect the optional printer to automatically output calibration results. Date and time are supplied by the balance's built-in clock.

### Backlight LCD

The backlight LCD display can be clearly read in the darkest of environments.

### Checkweighing Function

When upper and lower thresholds are set, the balance indicates if the sample weight is within the range (GO), over (HI) or under (LO).

### Piece Counting

A piece counting function is standard in addition to various unit conversions.

### Specific Gravity Function

The standard specific gravity measurement calculation function uses the Archimedes principle. Attaching the optional specific gravity measurement kit allows the balance to be used as a density meter or a hydrometer.

Data transfer port of UW/UX Series

## Electronic Balances

# TW/TX/TXB<sub>series</sub>

The beginning of the new standard.  
Extremely capable, but easy to operate.

### Touch-key Internal Calibration

Press just two keys to calibrate the balance whenever calibration is necessary (TW only). Calibration is very fast, taking only 15 sec.

### Easy Setting Best fit to weighing application

Quickly adjust the desired ratio of stability and response for every application, even during measurement, with one-touch operation.

### Menu Operation Key Easy-to-operate Key Layout

Menu navigation keys are separated from weighing operation keys and arranged in a familiar 5-way navigation circle. Up, Down, Right, Left and Enter are the simple operational steps.

### Expanded Piece Counting Function

Unit weights of up to five different samples can be easily entered, stored and recalled for use.

### Change among many weighing units and functions with a single touch

In addition to grams (g), weigh in %, number of pieces, ct, kg, mg, lb, oz, TTI, etc. or a custom conversion unit, more than 20 units in all. Change quickly from display of % or counting to gram weight (g) display.

### Comparator Function

Compare samples to target values or pass/fail criteria and clearly indicate the results.

### Can be used anywhere with battery power

Power the TXB series balances with an AC adaptor or batteries.

## TW/TXseries

Standard Models

The TW/TX series  
are recommended

The Easy Setting function eliminates troublesome settings.  
They can be used anywhere, at any time.

For balances that make weighing powders  
and liquids easy  
For use in environments subject to wind  
and vibrations  
For selectable stability and response

For easy operation

For registering multiple reference values  
for piece counting

Five types of sample weight units can be registered.

When a glass windbreak is required

T W	T X	Functions
		UniBloc
	ABS plastic	Case material
		Built-in weights for sensitivity calibration
		Perfect self calibration (PSC)
		Clock-CAL
		Clock function
		Easy Setting
		Menu operation key

## Moisture Analyzer

## MOC-120H

## Moisture Analyzer with a Wide Sample Pan

## MOC-120H

## Measure the Moisture Ratio of Even Large or Large Amounts of Samples

- The moisture ratio is found by heating the sample with the built-in infrared heater.
- The sample pan measures 130 mm in diameter, which is optimal for large and large amounts of samples.
- Importing results to a PC is easy (equipped with the Balance Keys function).
- Equipped with the UniBloc aluminum block mass sensor.

## MOC-120H

Model	MOC-120H
Measurement method	Infrared heating/dry mass measurement
Pan size	130 mm dia
Minimum weight displayed	0.001 g
Moisture ratio measurement range	0.01 to 100.00 %
Minimum moisture ratio displayed	0.01 %
Maximum sample quantity	120 g
Measurement modes	Automatic operation mode, Timed operation mode, High-speed drying mode, Low-speed drying mode
Drying heat source	Medium wave infrared quartz heater
Temperature settings range	30 to 200 °C (1 °C steps)
Unit dimensions and weight	W220 x D415 x H190 mm 4.5 kg
Operational temperature and humidity range	5 to 40 °C, relative humidity of 85 % max.
Required power supply	100 to 120/220 to 240 VAC, 640 W max.
Accessories	Sample pan x 2, pan holder, windbreak, sample pan tongs, aluminum sheet x 20, spatula

## Printer

Drying conditions during measurement and the final measurement value can be graphed and printed out.

## Optional Printer and Accessories

Description
Printer set includes a connection cord and 1 roll of printer paper (thermal paper)
Printer paper (10 rolls)

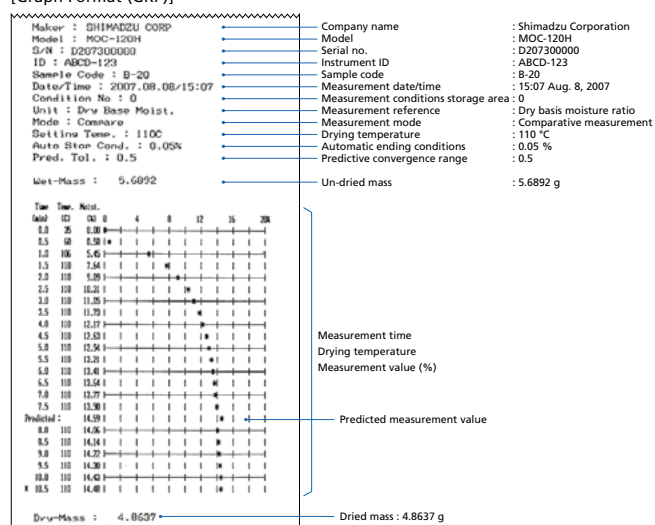

## Optional Accessories A Wealth of Accessories to Enhance Your Possibilities

Description
RS-232C cable
Sample pan
Aluminum sheets (500 pcs)
Temperature Calibration Kit*1
Protective display cover (5 pcs)

\*1 Temperature calibration using the optional Temperature Calibration Kit may be necessary depending on the measurement sample and the measurement conditions. Temperature calibration makes it possible to control the drying temperature of the measurement sample more accurately.

## Sample Output from Optional Printer

[Graph Format (GRP)]

## Warning

- Use this balance to heat samples to evaporate moisture for measurement.
- The built-in heater will be hotter than the set temperature.
- Samples must not be measured if there is a risk of an explosion or fire, or a dangerous chemical reaction from heating.

## Moisture Analyzer

## MOC63u

Easy, Reliable Moisture Content Measurements

## This Unit Makes Moisture Content Measurements Quick and Easy

- The moisture ratio is found by heating the sample with the built-in halogen heater to drive out the moisture.
- The measurement procedure is simple. Just close the heater cover to start the measurement (automatic starting mode).
- Measurements are faster than the loss on drying method using a dryer.
- A USB connector is standard, so connecting to a PC is easy (built-in Balance Keys function).
- Equipped with the UniBloc aluminum block mass sensor.

This product conforms with Shimadzu's ECO labeled product.  
Energy Saving: Power consumption reduced by 30% as compared to a conventional Shimadzu product.

The sample pan size is a spacious 95 mm dia.

Generally, the wider, thinner, and more uniformly the sample is spread, the more precise the measurement. Uniform heating is provided by adopting a cleverly shaped reflector (patent pending).

- ① A cross-shaped key layout has been adopted for excellent operability.
- ② A real-time indicator has been adopted, which blinks to show the measurement status.
- ③ The results are shown as a percentage using an LCD, backlit to enhance visibility.
- ④ Graphics are provided to let you confirm the pan status in real time.

## A Total of Five Modes Makes This Balance Compatible with a Variety of Sample Measurements

## Ending Modes

## Automatic Ending Mode

This automatically ends measurement when the moisture change (% margin) over 30 seconds drops below a set value.

## Timed Ending Mode

This automatically ends measurement after a preset amount of time (t1).

The sample is easy to see!  
Wide observation window

## Alternate Drying Modes

## Rapid Drying Mode

The sample is dried at the highest temperature for the initial drying stage, and when the moisture has been reduced, it returns to the set temperature, shortening the measurement time.

## Slow Drying Mode

This gently heats samples that might form a surface film or are prone to degrading at high temperatures.

## Step Drying Mode

Drying conditions are changed step by step for samples that contain a lot of moisture, such as surface water or crystallization water.

# MOC63u

## MOC63u

	Model	MOC63u
Capacity	Max. sample quantity	60 g
	Min. sample quantity	0.02 g
Minimum display	Mass	0.001 g
	Moisture ratio	0.01 %
Repeatability *1		0.15 % (2 g), 0.05 % (5 g), 0.02 % (10 g)
Heat source	Method	Halogen (straight tube)
	Power	Rated at 400 W
Temperature settings		50 to 200 °C (1 °C interval) (up to 1 hour for settings over 180 °C)
Display		Backlit LCD
Pan size		95 mm dia.
Dimensions (mm)		Approx. W202 × D336 × H157
Weight		Approx. 4.2 kg
Rated power		430 VA
Ambient temperature		5 to 40 °C, relative humidity of 85 % max.
Measurement modes		Standard drying mode (Automatic ending/timed ending)
		Rapid drying mode (Automatic ending/timed ending)
		Slow drying mode (Automatic ending/timed ending)
		Step (3-stage) drying mode (Automatic ending/timed ending)
Time settings		1 to 240 min, or continuous (up to 12 hours)
External output		USB
		Data I/O printer (EP-100/EP-110) output RS-232C (D-sub 9P)
Storage of measurement conditions		10 sets
Data memory		100 items
Standard accessories		Sample pans (3 aluminum pans), pan holder, windbreak, board, aluminum sheets (50), pan handler, power cable, spare fuses (2), protective display cover, hexagonal wrench

\*1 The repeatability (standard deviation) value is from a standard measurement (sample: sodium tartrate dihydrate). This value is not guaranteed for all samples, environments, and measurement conditions.

## Options A Wealth of Accessories to Enhance Measurement Possibilities

Description
EP-100 Printer
EP-110 Printer
Protective display cover (5 pcs)
Aluminum pans (disposable) (50 pcs)
Fiberglass sheets (for liquid sample measurements) (100 pcs)
Temperature Calibration Kit
Sample pan (stainless steel) (5 pcs)
Sample pan (aluminum) (5 pcs)
RS-232C cable
USB cable set
Sample pan handler (stainless steel)
Halogen heater (for replacement) *2
Power cable

\*2 The halogen heater can be removed and replaced by the user.

Note: For delivery related matters, contact your Shimadzu representative.

## Warning

- Use this balance to heat samples to evaporate moisture for measurement.
- The built-in heater will be hotter than the set temperature.
- Samples must not be measured if there is a risk of an explosion or fire, or a dangerous chemical reaction from heating.

## Simple Operation

Select the automatic starting mode, place the sample, and close the heater cover to start the measurements. The preparation for measurement is so simple that you do not even have to press the start key.

## USB INTERFACE A Wealth of PC Connection Functions

A USB connector is built in as standard for connecting to a PC. It can be used in conjunction with the Balance Keys function.

For Windows Vista, Windows 7, Windows 8 and USB port connections, check the Shimadzu website, or contact your Shimadzu representative.

- Built-in RS-232C interface is standard.
- Compatible with printers (EP-100/EP-110). Equipped with I/O port.
- Equipped with USB interface. Importing data to a PC is easy.

## Sample Printout

Using the EP-100/EP-110

## Moisture Analyzer

## MOC63u Sample Applications

Food

## Measurement of Milk

- Fiberglass sheets for liquid measurement were used to promote liquid evaporation.
- Two measurement conditions were used, timed ending and automatic ending modes. Essentially, the same average values were obtained. With samples featuring a principal component that has a relatively high evaporation temperature and also contains moisture, the same results will be obtained regardless of the mode used.

## Measurement of Milk

Measurement conditions: 140 °C/TIME 10 minutes

MOC63u		
	Sample mass (g)	Moisture ratio (%)
1st	1.081	87.70
2nd	1.025	87.61
3rd	1.031	87.68
Average		87.66
Standard deviation		0.047
CV(%)		0.05

The drying curve for milk in timed ending mode is shown below.

Photos of the milk before and after drying are shown below.

(Before measurement) 1 g of milk was dripped on to a fiberglass sheet for liquid measurements.

(After measurement) The moisture has evaporated from the milk, and the remaining fats have yellowed slightly.

Food

## Measurement of Instant Coffee

- Commercially available powdered instant coffee was measured. A sample of approximately 1 g was placed in the pan, and the pan was shaken to spread the sample over the entire pan.
- Essentially no difference in the moisture ratio was evident in timed ending mode or automatic ending mode. When a high drying temperature is set to shorten the drying time, the radiant heat from the halogen lamp becomes significant, and sample surfaces are sometimes scorched. Accordingly, with colored samples and samples prone to degradation, it is better to set as low a drying temperature as possible.

## Measurement of Instant Coffee

Measurement conditions: 120 °C/TIME 10 minutes

MOC63u		
	Sample mass (g)	Moisture ratio (%)
1st	0.994	7.33
2nd	1.079	7.50
3rd	0.980	7.45
Average		7.43
Standard deviation		0.087
CV(%)		1.18

The drying curve for instant coffee in timed ending mode is shown below.

Photos of the instant coffee before and after drying are shown below.

(Before measurement) The sample was spread evenly over the pan.

(After measurement) There was basically no discoloration.

Food

## Moisture Content Measurement of Baked Sweets

- In the official test method, the drying period in a thermostatic chamber is five hours, so more than five hours are required to obtain the moisture ratio results.
- When the sample was measured using a moisture analyzer (in timed ending mode) at 110 °C, 10 °C higher than the 100 °C drying temperature specified in the official method, results similar to those from the official method were obtained with a drying time of 15 minutes.
- At 15 minutes in timed ending mode, the moisture ratio from the official test method is not reached. However, a moisture ratio similar to that from the official test method can be obtained if the drying time is set slightly longer.

Drying curve for moisture ratio of baked sweets measured in rapid drying mode (vertical axis: moisture ratio; horizontal axis: time)

Ground up baked sweets loaded in the MOC63u

### Summary of Results Found for the Moisture Ratios of Baked Sweets Using Several Methods

A summary of moisture ratios and measurement times in the official test method, timed ending mode, and rapid drying mode is shown below.

Measurement method	Moisture ratio	Measurement time
Official test method	7.6 %	5 hours
Timed ending mode	7.1 %	15 min
Rapid drying mode	7.8 %	5 min 10 sec

Baked sweets removed from the thermostatic chamber

## Moisture Content Measurement of *Dengakumiso* (fermented soybean paste)

Food

- In the official test method, the drying period in a thermostatic chamber is five hours, so more than five hours are required to obtain the moisture ratio results.
- When the sample was measured using a moisture analyzer (timed ending mode) at 105 °C, the same temperature as specified in the official test method, results similar to those from the official test method were obtained in about one hour.
- At one hour in timed ending mode, the moisture ratio from the official test method is not reached. However, a moisture ratio similar to that from the official test method can be obtained if the drying temperature is increased, or if the drying time is set slightly longer.

Drying curve for moisture ratio of *dengakumiso* measured in rapid drying mode (vertical axis: moisture ratio; horizontal axis: time)

Fiberglass sheet coated with *dengakumiso* and loaded in the MOC63u

### Summary of Results Found for the Moisture Ratios of *Dengakumiso* Using Several Methods

A summary of moisture ratios and measurement times in the official test method, timed ending mode, and rapid drying mode is shown below.

Measurement method	Moisture ratio	Measurement time
Official test method	39.4 %	5 hours
Timed ending mode	37.2 %	1 hour
Rapid drying mode	40.1 %	7 min 45 sec

*Dengakumiso* removed from the thermostatic chamber

## Moisture Analyzer

## MOC63u Sample Applications

Food

## Moisture Content Measurement of Rice Seasoning

- In the official test method, the drying period in a thermostatic chamber is four hours, so more than four hours are required to obtain the moisture ratio results.
- The sample was measured using a moisture analyzer at 110 °C, 5 °C higher than specified in the official test method (timed ending mode). Despite the increased drying temperature, the moisture ratio from the official test method was not reached at 1/4 the time from that test method.
- When the sample was measured in rapid drying mode to shorten the time, a value similar to that from the official test method was obtained in 3 minutes and 35 seconds. This is because heating the sample at 200 °C in step 1 caused immediate evaporation, thereby promoting evaporation efficiency.

Drying curve for moisture ratio of rice seasoning measured in rapid drying mode (vertical axis: moisture ratio; horizontal axis: time)

Rice seasoning loaded in the MOC63u

#### Summary of Results Found for the Moisture Ratios of Rice Seasoning Using Several Methods

A summary of moisture ratios and measurement times in the official test method, timed ending mode, and rapid drying mode is shown below.

Measurement method	Moisture ratio	Measurement time
Official test method	3.1 %	4 hours
Timed ending mode	2.5 %	15 min
Rapid drying mode	3.0 %	3 min 35 sec

Rice seasoning removed from the thermostatic chamber

## Moisture Content Measurement of Boiled Fish Paste

- In the official test method, the drying period in a thermostatic chamber is five hours, so more than five hours are required to obtain the moisture ratio results.
- When the sample was measured using a moisture analyzer at 105 °C, the same temperature as specified in the official test method, the results after a drying time of one hour were slightly less than those from the official test method.
- At one hour in timed ending mode, the moisture ratio from the official test method is not reached. However, a moisture ratio similar to that from the official test method can be obtained if the drying temperature is set higher, or if the drying time is set slightly longer.

Drying curve for moisture ratio of boiled fish paste measured in rapid drying mode (vertical axis: moisture ratio; horizontal axis: time)

Ground up boiled fish paste loaded in the MOC63u

#### Summary of Results Found for the Moisture Ratios of Boiled Fish Paste Using Several Methods

A summary of moisture ratios and measurement times in the official test method, timed ending mode, and rapid drying mode is shown below.

Measurement method	Moisture ratio	Measurement time
Official test method	73.8 %	5 hours
Timed ending mode	69.7 %	1 hour
Rapid drying mode	72.9 %	21 min 30 sec

Boiled fish paste removed from the thermostatic chamber

# Moisture Analyzer

# MOC63u Sample Applications

The table below summarizes moisture ratio measurements for various samples using the moisture analyzer.

Sample	Sample Quantity	Measurement Mode		Set Temperature (°C)	Measurement Time (min)	Moisture Ratio (%)	CV (%)
		Ending Conditions	Finishing Conditions (% or min)				
Dog food	1 g	AUTO	0.05 %	160	5:48	6.45	3.17
Table salt	5 g	TIME	10 min	200	10:00	0.08	6.93

Note 1: Measurement times, moisture ratios, and CV (%) values are aggregated from three data cycles.

Note 2: The CV (%) is the standard deviation divided by the average value, multiplied by 100 to represent it as a percent.

## Electronic Printers

## EP-100/EP-110

Enhanced Support for  
ISO/GLP/GMP

- Built-In Clock
- Affordably Priced

EP-100

- Enhanced Visibility for OLED Display
- Includes Functionality for Preventing Date Alterations

EP-110

## EP-100/110 Shared Functionality

- **Built-In Clock** Date/time can be printed even for balances without a clock function.
- **Customized Printing** In addition to weight measurement values, print items can also be added to the end.
- **Easy Communication Settings** Includes functionality (automatic setting function) that automatically sets communication settings based on the given balance.  
Note: This function is disabled for ELB series models and MOC63u moisture analyzers.
- Titles for measurement values can be freely customized for printing.

## Compatible Balance Models

AP, AU, AT, U, TX, TXB, BX-K, BL, and ELB series,  
and MOC63u moisture analyzers.

Note: The automatic setting function cannot be used with models that do not include the PRINT key, such as ELB series balances and MOC63u moisture analyzers.

## Specifications

Model	EP-100	EP-110
Display	—	OLED 128 × 64 Dot Matrix Display Easy-to-understand fluorescent dot matrix display
Protected date setting	—	Password protectable (six-character)
Printing	Paper for printing: Regular paper (does not fade with age) Method: 8-pin reciprocating impact dot matrix Speed: Approx. 1.7 lines/sec. Printer head life: 1 million lines Character size: Approx. W1.7 × H2.6 mm	
Interface	USB B-Type female, RS-232 (D-sub 9-pin male)	
Power supply	AC adapter: Input 100 to 240 V AC, 50/60 Hz; Output 12 V DC/1500 mA Power consumption: 8 W (while printing) Standby power: 0.5 W (when not printing)	
Battery	—	1500 to 2500 mAh capacity rechargeable nickel-metal hydride (NiMH) batteries can be used (four AA cells). Note: Dry cell batteries cannot be used.
Installation environment	Temperature: 5 to 45 °C; Humidity: 10 to 80 % No condensation	

## Maintenance Parts

Description
Recording Paper
Labeling Paper Rolls
Ink Ribbon
AC Adapter
Connection Cable

## EP-110 Function

## Supports GLP/GMP Using Password Protection-Based Date/Time Alteration Prevention

## Powered by Rechargeable Batteries

Eliminating the need for an AC adapter connection, the printer can be used as a portable device. It also means the printer can be used in locations without a power supply outlet, such as within a fume hood. Note: Dry cell batteries cannot be used (compatible with nickel metal hydride batteries).

## Status Display with Enhanced Visibility for OLED Display

The OLED display makes it easier to determine the measurement mode-based status. The OLED display also ensures visibility even in dark locations.

## Specific Gravity Analyzer

# APseries

NEW

Attach Special Optional Kit for Use as  
Specific Gravity Analyzer

When combined with an optional specific gravity measurement kit, balances can be used to measure specific gravity. Operations are simplified by a text-based navigation function. By using sinkers, the specific gravity of liquid can be measured as well. This allows easily measuring of the specific gravity of metals, rubbers, plastics, and other materials.

SMK-601 specific gravity measurement kit

Simple!

First measure the in-air weight.

Then place it in the container filled with water, as instructed on the screen.

The specific gravity value is displayed using simple steps.

Liquid Density Sinker
Petri Dish, Square

## Specific Gravity Analyzer

**AU**seriesMeasures a Variety of Gravity Values  
with the Immersion Method

Attach the optional SMK401 Specific Gravity Measurement Kit to a balance in the AU series, and set the balance to specific gravity measurement mode. You can then use the balance as a specific gravity analyzer, capable of automatically calculating and displaying specific gravity values.

Liquid density can also be measured by using an optional sinker.

Various models of balances are available, including a semi-micro (0.01 mg) model. Choose the model best suited to the sample amount and required precision in your application.

Two kinds of weighing pans as standard.

For standard sample

For floating sample

# Specific Gravity Analyzer

## UW/UXseries

Measures a Variety of Specific Gravity Values  
with the Immersion Method

Attach the optional SMK-101/102/201 Specific Gravity Measurement Kit to a balance in the UW/UX series, and set the balance to specific gravity measurement mode. You can then use the balance as a specific gravity analyzer, capable of automatically calculating and displaying specific gravity values.

Liquid density can also be measured by using an optional sinker.

Various models of balances are available. Choose the model best suited to the sample amount and required precision in your application.

The large submersible pan makes it easy to measure bulky samples.

UW/UX Series + SMK-101

### Specific Gravity Measurement Kit

Model	SMK-102 for small pan <sup>*1*3</sup>
	SMK-101 for large pan <sup>*1*2</sup>

### Optional Accessories

Description
Liquid Density Sinker for SMK-101/102

<sup>\*1</sup> The optional liquid density sinker is required for liquid density measurements.

<sup>\*2</sup> For UW/UX series large-pan (170 x 180 mm) types. The actual capacity is 100 g smaller than the capacity of the balance.

<sup>\*3</sup> For UW/UX series small-pan (108 x 105 mm) types. The actual capacity is 290 g smaller than the capacity of the balance. Cannot be attached to the UW/UX 220H.

In addition to the above-mentioned, balances with the  mark are equipped with a specific gravity calculation function, so they can be used for specific gravity measurement.

# Introduction to the Specific Gravity Measurement Procedures (AU Series)

1

Assemble the Specific Gravity Measurement Kit.

2

Set the balance to specific gravity measurement mode. Then press the UNIT key several times until the display unit changes to "▼d."

As shown in the photo at left, "Air" will be displayed for a while, and the in-air weight is then measured.

3

Press the O/T key to subtract the tare.

4

Load the solid sample on the in-air pan.

5

When the stability mark is lit, press the CAL key.

As shown in the photo at left, "wAtEr" will be displayed for a while, and the submerged weight is then measured.

6

Load the solid sample on the submerged pan.

7

When the stability mark is lit, press the CAL key.

8

A "\*" will be displayed in the numerical display, and the specific gravity of the solid sample will be displayed.

To return to in-air measurement, press the CAL key to display "Air" for in-air weight measurement.

#### Sample Data Example

Sample	Specific gravity
Aluminum	2.68 ± 0.1
Brass	8.45 ± 0.4
Copper	8.8 ± 0.4

\* Results will differ depending on the shape and surface status of the sample, and the measurement conditions.  
The values in the table are at best reference values, and their precision is not guaranteed.

## Animal Balances

## UW/UXseries

## Quick, Stable Measurements of Animal Weight

Attach an optional animal bucket to a UW/UX series balance, and set the unit to animal mode. The balance can now be used as a user-friendly animal balance.

Bucket for small animals

Deep round bucket

Rectangular bucket

## Animal Measurement Mode

When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero. The next animal can be loaded without pressing the TARE button, which increases efficiency.

● Thanks to the specially developed animal measurement software, the weight of moving animals is measured quickly and stably.

## UW series is equipped with built-in calibration weights

The Clock-CAL function automatically performs sensitivity calibration at preset times, significantly reducing the labor for routine inspections. Naturally, one-touch sensitivity calibrations are also possible at any time.

## UW Series

## UX Series

## UW/UX Series (balance)

Model	Standard models					Models with built-in calibration weights				
	UX2200H	UX4200H	UX6200H	UX4200S	UX8200S	UW2200H	UW4200H	UW6200H	UW4200S	UW8200S

**Small Animal Bucket** Shape: round / Size: bottom 110 dia. × top 200 dia. × height 130 (mm)

**Deep Round Bucket** Shape: round / Size: bottom 155 dia. × top 195 dia. × height 200 (mm)

**Rectangular Bucket**\*1 Shape: rectangular / Size: bottom 250 × 210; top 290 × 250; height 150 (mm)

\*1 The rectangular bucket can only be attached to the UX8200S and UW8200S.

### Three movement levels can be selected corresponding to the animal movement.

Animals can be measured whether they are docile or extremely active.

### When the animal is loaded and the stability mark is displayed, the weight is output automatically.

Needless operation is eliminated to increase efficiency.

### When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero.

The next animal can be loaded without pressing the TARE button, which increases efficiency.

Animal Balances

BW-K/BX-Kseries

Quick, Stable Measurements of Animal Weight

Attach an optional animal bucket to a BW-K/BX-K series balance, and set the unit to animal mode. The balance can now be used as a user-friendly animal balance.

Animal Measurement Mode

- Models with a range of capacities are available. Ideal for medium weight measurements of rabbits and small dogs.
- Thanks to the specially developed animal measurement software, the weight of moving animals is measured quickly and stably.
- When the animal is unloaded, residual weight from excretions and other materials is automatically subtracted and the display is set to zero. The next animal can be loaded without pressing the TARE button, which increases efficiency.

Integrate Analysis Data Acquired from Balances to  
Analytical Network Data System Compliant with ER/ES Regulations

# LabSolutions Balance NEW

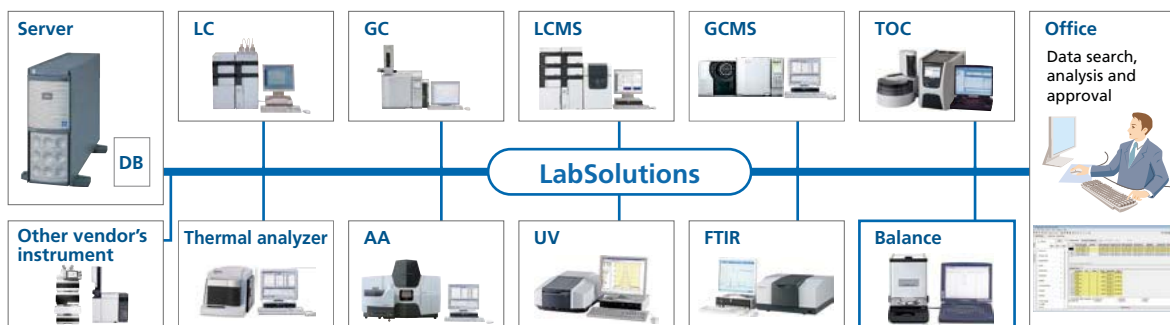

## Improves Operational Efficiency and Data Reliability

- Eliminate manual entry and all the weighing data are saved automatically in a safe database without transcription mistakes.
- Reports appropriate for weighing methods, such as the mass variation test, drying weight loss test and particle size test, can be created automatically after the measurement. In addition, customized reports featuring such information as system conformance, content uniformity and elution tests together with the analysis results obtained by HPLC, etc. can be created.

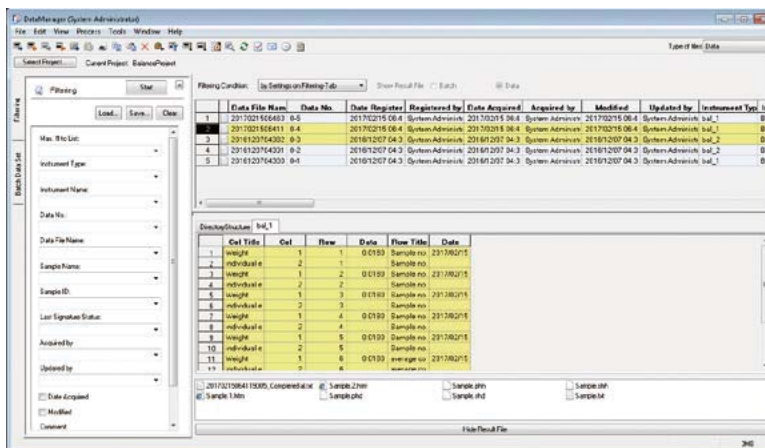

Main Window of LabSolutions Balance

## Integrated Management of Analytical Data on Network System Using LabSolutions

## Compliant with the Latest Data Integrity Guidance (U.S. FDA 21 CFR Part 11)

- Weighing results can be automatically saved in the database together with other information, including sample ID, operator name, operation date and series number of instrument used. This enables quick data searching based on sample information.
- It allows setting up user authority to ensure only the authorized user can create a template for weighing.
- It prevents improper manipulation, unintended overwriting and deletion of data. In addition, measurement results, all the operation histories and reasons will be saved in the database as log files.

LabSolutions Data Manager

## Integrated Report Creation Function Combines Analysis Results from HPLC and Weighing Results from Balance

### Creation of Report Template

It enables creating the report by reading sample data and confirming the sample report at the same time.

### Select Report Template

Batch Analysis Window

Report template formats can be freely customized.

Automatically print reports and create PDF files.

Note: Multi-data report creation (optional) is necessary to use this function.
